

Radius Mouldings

Standard Profiles

All of our standard moulding profiles can be made into a rigid radius. If you need a moulding for an Inside Radius (Concave), Outside Radius (Convex), Arch Radius, or Elliptical Arch Radius for your next project, we can provide it with our precise technology and expertise.

When ordering an irregular radius please send us a template that fits against the curve and is marked with the moulding position information.

Custom Radius Profiles

Often radius mouldings are custom, designed for a specific look or need. Be it a new build or a replication of a historical feature, we have all the capabilities to produce it as you have dreamed it.

If you decide to get a standard profile or completely custom, our radius moulding products are created using technology that is consistent and produced with the highest quality.

FLEXIBLE MOULDING

Spectis has over 750 moulding profiles in its catalogue for use in just about any design situation. We can produce most of our profiles in either **Iron FLEX** or **Deco Flex**. These products can be used around a range of radii and will match Spectis' rigid material. For specific application and pricing please contact your Spectis Customer Service Representative.

IRON FLEX is an elastomeric semi-flexible material, which can be used in either interior or exterior applications. This material is limited to moulding profiles that are moulded in a lay down, flat back configuration.

DECO FLEX is cellular polyurethane, which can only be used for interior applications. It can be used with a variety of our moulding profiles.
