# Trellis Systems & Gazebos

Outdoor Living

When dreaming up trellises, countless options are available with Spectis products.

Our structural trellis **beams** come in 3 sizes: 3"x6", 3"x9" and 4"x10", up to 12'-0" long, but can also be customized and extended to create systems of virtually any size. The 3"x6" can also be ordered non-structural. Ends can either be straight or coped for the same cost. **Notching**, as seen here, is available for an additional fee.

**Columns** for trellises can either be round or a box column. Our products can be painted to match any backyard décor. We can also supply all the **hardware** and **adhesive** needed to ensure the trellis system will be firm and secure. Our KIT 101 contains hardware to fasten columns to both trellis and concrete decking, as well as flashing for over the column caps.

At Spectis, we specialize in **customization**. As seen below, trellis beam configurations can be customized to any design. Beam alterations and even modified coped ends are available from us!

Spectis polyurethane products can be used to enhance any outdoor living space. Unlike wood, our product will withstand moisture and humidity and are mildew resistant, making it more cost effective overall.

Blocks, niches, festoons, medallions, columns, mouldings - all 'fair game' for your designer to choose from.

Follow us on Facebook and Instagram for pictures, information and projects.
