

Attic Access Doors & Louvers

Seen here is our most popular attic access door - the **PAADS 2231**. It is 21" wide and 30" high, fitting a rough opening of 22 1/4" wide x 31 1/2" high. Projection is 1 7/8". The access opening is 18 3/4" x 28".

It has a polyurethane frame and hinged door which is an open vent with insect screening on the back side, allowing 145 square inches of venting area. The **hinges** are white, making them almost invisible on a white unit.

Spectis **LOUVERS** can be ordered as closed or open in every shape and size. The projection for the closed louver is 1 1/2" and the open louver is 1 1/4". All the open louvers come with insect screening on the back side at no additional cost.

Custom sizes and shapes can be made to fit every project. Siding rabbets are available upon request. The typical rabbet is 3/4" x 3/4" so make sure to let us know if you would like different dimensions.

For some of our louver sizes we have standard flat trim to fit around the louver to enhance the look. For example, shown here, the FTA4 2852 will fit around the LCA 2852. This adds another 4" casing.

Here are 2 examples of flat trim added to louvers.

LOUVERS - Any Shape, Any Size
