

RESTORATION PROJECTS - Benefits of Polyurethane

When concrete corbels crumble and a restoration project is underway, moulded polyurethane can perfectly replicate the original shape and texture. At Spectis Moulders, we specialize in custom restoration projects of all sizes.

Send us an original item and we can mould an exact replica. Having a master sent to us to remould ensures an exact duplicate when matching possible wind erosion of the items staying on the building. With polyurethane products, imagine the ease of installation compared to concrete products!

In restoration projects that Spectis Moulders has been a part of, we replicated wood balustrades, plaster mouldings, concrete blocks and corbels, columns, capitals—ornate as well as simple, bases, plaques, appliques and more.

Shown here is a plaster column capital that was sent to us from The Durant Hotel restoration in Flint, Michigan. With the poor state the plaster was in, it could not be used as a master but we remade it using the

FABRICATED & SHIPPED IN QUARTERS

existing visible details. We moulded and shipped this cap in quarters. The photo above shows the new look for the hotel.

Some restoration requests have come with only a photo, like the medallion shown below. This makes the process more tricky but can also help us produce favorable end products.

As with all our custom projects, once pricing has been established, our CAD team will make detailed drawings with dimensions for the customer to approve before any production is started, ensuring we are manufacturing exactly what the end user is aiming for.

In our Volume 8-1 catalogue we have more before and after pictures for you on pages 254 and 255.
