

Care of Polyurethane Products

Pressure washers are great for cleaning decks but can be too forceful for cleaning outdoor polyurethane products. Polyurethane shutters, column bases, mouldings, etc., will clean up well with a light spray or a damp cloth. Interior products can be dusted with a feather duster or given a light wash with a damp cloth. Just like wood products, an occasional coat of paint will also help give Spectis products a fresh new look.

Because polyurethane is not susceptible to rot, weathering or mildew, all Spectis products will likely outlast the life of a home when getting regular cleaning and care!

Spectis Sales Team

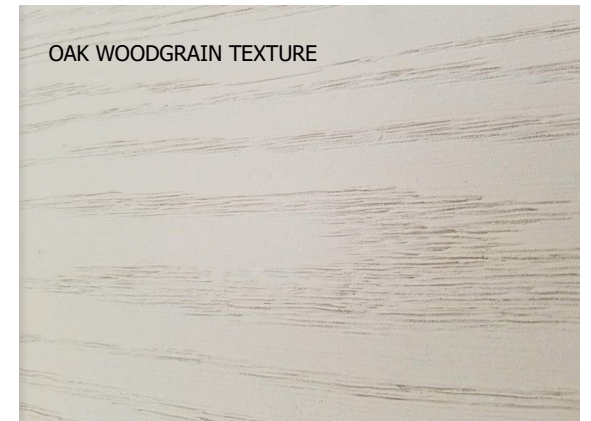

Just like our product line continues to grow, so also our sales team continues to grow throughout North America. Check our website for new sales team members in your area or give our in-house customer service people a call for any questions or needs you may have at 1-800-685-9981.

Visible Detail in Polyurethane

Moulded polyurethane clearly displays any texture used in the original mould. Intricate flowers, shown here from our ceiling medallion CM4471, or even a wood grain or concrete texture, will continue to be pristine for each polyurethane pour. When a master gets sent in for us to replicate, the layers of paint can be removed to show the beauty of the wood grain if desired. If the parts need to match the condition of other existing parts staying on the building, make sure to let us know so we can make the new products 'fit right in' by giving them a pre-weathered look.
